(54) Title: APPARATUS FOR MEDIATING IN MANAGEMENT ORDERS

WO 2005/053229 A1

(57) **Abstract:** A method and an apparatus for mediating in management orders between a plurality of origin managers and a plurality of managed devices in a telecommunications system. The apparatus comprises: a Communication Receiver Component (201) arranged for receiving management orders, a Communication Sender Component (203) arranged to send an allowed management order to a managed device, and a Management Verifier Component (202), arranged to determine whether a received management order is an allowed management order. The Management Verifier Component checks whether a received management order fits with the access attributes comprised in one, or more, management access templates. A management access template is selected according to its relationship with an identifier of the origin manager sending the order, and/or with an identifier of a managed data object affected by said order, and/or with an identifier of a managed device affected by said management order.
